ITINERARY

- Aug 11-14 - Pre-tour to the Namibian coast, Walvis Bay and Swakopmund
- Aug 14 - Flight to Huab Lodge
- Aug 15 - Huab Lodge
- Aug 16 - Huab Lodge, drive to Okakeujo Camp, Etosha
- Aug 17 - Etosha (Okakeujo to Halali via Okandeka, Rietfontein waterhole)
- Aug 18 - Etosha (Halali to Namutoni Camp via Goas and Kalkheuwel waterholes)
- Aug 19 - Etosha (Namutoni to Andoni plains via Klein Okeivi, Tsumcor and Stinkwater)
- Aug 20 - Namutoni Camp; charter to Bagani (Caprivi Strip); Mahango Game Reserve to Shakawe
- Aug 21 - Shakawe
- Aug 22 - Shakawe
- Aug 23 - Shakawe, flight to Xakanaxa, Moremi
- Aug 24 - Xakanaxa
- Aug 25 - Xakanaxa, flight to Livingstone via Kasane
- Aug 26 - Zambezi boat trip, and game drive in the Mosi oa Tunya National Park
- Aug 27 - Hotel grounds in Livingstone and flight back to Johannesburg

TOUR SUMMARY

An unusual climate and rainfall pattern again made this year's tour an interesting challenge, with several species that are usually a given on this itinerary proving surprisingly elusive. Namibia experienced its highest rainfall in decades, and grass and bush cover was thicker than on past tours, making the finding and viewing of terrestrial species more difficult than usual. Even the Namib Desert—one of the driest in the world—had a healthy growth of grass!

Flight schedules this year meant that our time at Huab was unfortunately cut short, but in spite of this we managed great views of most of the arid zone endemics we look for on this leg of our tour.

The good rains and excellent grazing meant that the distribution of game in Etosha was very different from that which we usually encounter on this tour. Large herds of antelope were still present in the western section of the park, and the first breeding herds of elephants only encountered between Halali and Namutoni, but game-viewing was generally excellent.

Shakawe again delivered its usual spectacular array of bush and water birds, while Xakanaxa also provided great views of leopard, lion, and elephant (including a lone bull that caused havoc around our tents each night), as well as a variety of bush bird species.

The boat trip on the Zambezi above Victoria Falls was one of the best ever, producing great sightings of several special birds.

A puzzling aspect of this leg, however, was the dearth of seedeaters, as well as the surprisingly few Rock Pratincoles that were present on the exposed rocks above the falls. On previous tours we have recorded flocks of several hundreds hawking insects over the Falls!

Our pre-trip to the coast (Walvis Bay and Swakopmund) proved a great addition, giving a wonderful spectacle of thousands of both Greater flamingos; ultra-close views of Great White Pelicans; large numbers of shorebirds; and a total of 12 regionally endemic or near-endemic bird species. It also gave us great "at our feet" views of the unusual Pinguicula's Adder, a near-endemic burrowing snake of the Namib dunes.

KEY

- E Denotes a regional Endemic Species
- NE Denotes a regional Near-Endemic Species
- BE Denotes a breeding endemic species
- Recorded on pre-tour
